80538 München (DE)

Remarks:

This application was filed on 19 - 04 - 1999 as a divisional application to the application mentioned under INID code 62.

(54) **Set top terminal for cable television delivery systems**

(57) A method for generating a menu with video for use with a set top terminal in a program delivery system with menu selection of programs from a plurality of individual menus, using a program signal with split screen video channel, comprising the steps of choosing a split screen video channel from the program signal; decompressing the split screen channel of the program signal; selecting the desired portion of video on the split screen

channel; creating a mask of all the portions of the split screen channel which are not selected; overlaying the mask on the split screen video channel; overlaying menu graphic information on the masking; overlaying text information on the graphics and masking; and displaying the overlays as a menu.
